valuable resource!

Text Book Contents

A Clinician's Guide to Donation & Transplantation

Editors:

Dianne LaPointe Rudow, DrNP, CCTC
Linda Ohler, RN, MSN, CCTC, FAAN
Teresa Shafer, RN, MSN, CPTC

Expert Clinicians, including transplant coordinators, administrators, surgeons, physicians, policy analysts and others have come together to create this comprehensive textbook on donation and transplantation.

38 Chapters — among them:

- **History of Transplant**

Coordination—Exhaustive review of transplant coordinators and their history, from 1962-2006. (includes early photos)

“The worldwide system of transplantation could not exist as we know it today without the transplant coordinator. They are the go-to, can-do, get-it-done glue and web that holds together the many disparate pieces of the complex transplant process.”

General:

- Organ allocation
- Ethical issues
- Multicultural considerations
- Transplant economics
- Tissue transplantation

Organ/Tissue Recovery:

- The Organ Donation Breakthrough Collaborative
- Brain death
- Effective consent
- Assessment of donor suitability
- Clinical donor management
- Pediatric donor management
- Surgical recovery of organs
- Donation after Cardiac Death policy and creating an effective DCD program
- Organ preservation
- Medical examiner release of organs for transplant

Clinical Transplantation:

- Organ-specific chapters on kidney, pancreas, heart, lung, liver, intestine, islet cell covering indications, selection criteria, testing, consultations, risks/benefits, surgical procedure, post-transplant care and rejection
- Pediatric transplantation
- Living donor chapters on lung, liver and kidney following above outlines.
- Informed consent and donor advocacy
- Transplant immunology
- Pharmaceutical care
- Education
- Understanding laboratory tests
- Complications & infections post-transplant
- Women's health post-transplant
